

প

Porichoy (পরিচয়)

DPP-in-a-Box — every garment gets a verifiable identity before the EU's 2027 wall.

THE PROBLEM

1

A dated regulatory wall

EU ESPR in force 18 Jul 2024; textiles in the 1st Working Plan (Apr 2025); textile DPP delegated act expected ~2027.

2

Customs will auto-check passports

EU customs verify existence & authenticity of DPPs on imported garments — no passport data, no order.

3

The data is trapped in chaos

Factory records sit in mixed Bangla/English Excls, ERP exports and paper trim cards. Global platforms don't climb onto the factory floor.

Live product, built & verified: rudra496.github.io/porichoy

· Sources: European Commission (ESPR) · BGMEA

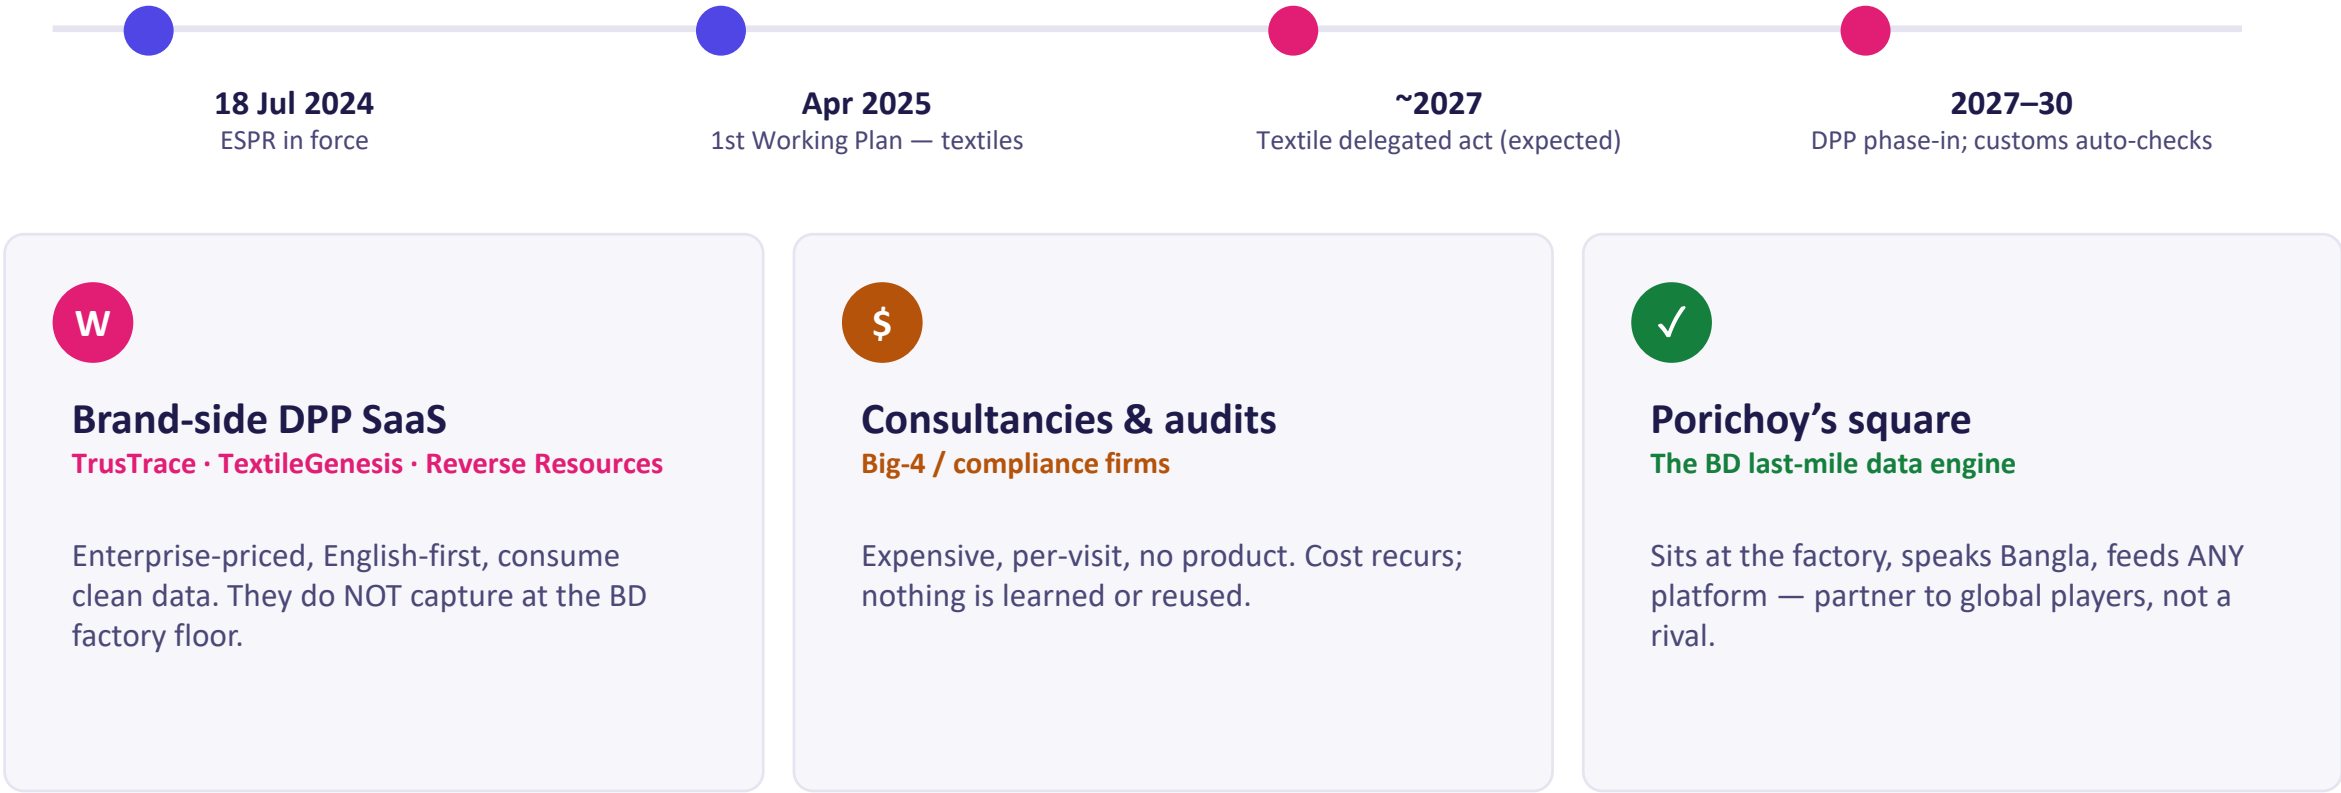

≈4 million RMG workers, majority women (BGMEA)

#2 exporter world RMG — Europe the biggest market

2027–30 EU DPP obligations phase in; customs auto-checks

RMG FACTORY FLOOR, CHATTOGRAM · PHOTO: S. BISWAS, CC BY-SA 4.0, WIKIMEDIA COMMONS

A compliance budget with a deadline — and an empty factory-floor square

Beachhead: mid-size exporters already facing buyer DPP requests → buying houses & certification bodies → integration partnerships with global DPP platforms.

- 19 automated engine tests SHA-256 provenance chain বাংলা + English UI

Porichoy (পরিচয়) · Needle Innovation Challenge 3.0 · All screenshots are the live production app (fetched 2026-09-13) · rudra496.github.io/porichoy

Factories pay little; brands pay to make their suppliers compliant

Factory SaaS

BDT 2,000–8,000 / month by size — SME-priced, ~10× below enterprise platforms

Onboarding & data-rescue

One-time fee: steward training + first ingest + mapping historic files

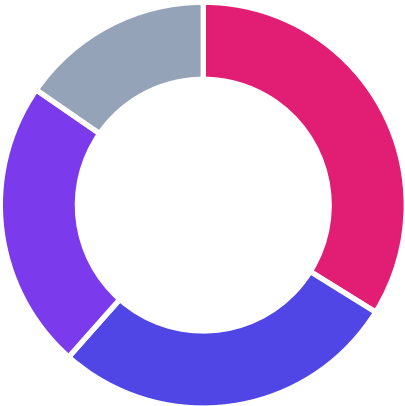

Brand-funded onboarding

Buyers pay to onboard their supplier base before 2027 — CAC moves to the party with the money

Unit economics: onboarding ≈ 2 person-days per factory · software gross margin >80% · replication is a template, not a project.

BDT 650,000 pollination grant — use of funds

- 10-factory pilot & steward training (220k)
- OCR for paper trim cards (180k)
- Mapping corpus: Bangla + ERP (150k)
- Legal entity & compliance (100k)

3-year path — targets

A builder who ships production systems alone — with the right domain

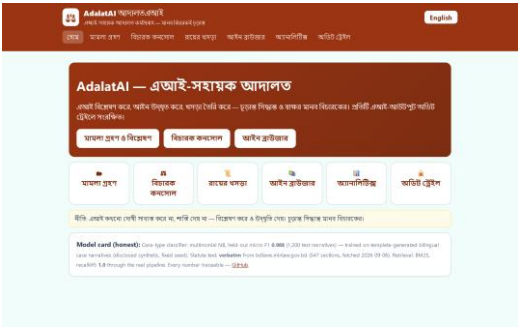

Rudra Sarker

Founder & Engineer

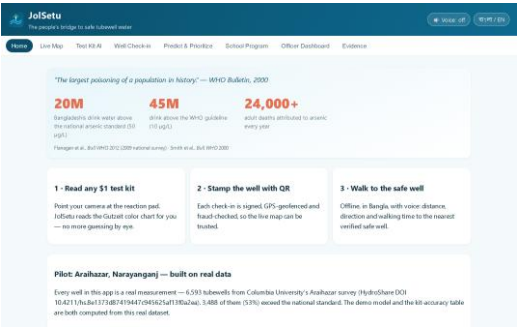

Final-year B.Sc. Industrial & Production Engineering, SUST

Q1 journal article (J. Ethnopharmacology, 2026, 3rd author) · full-time on Porichoy · ready for both residential bootcamps

Why me for THIS product: factory-process engineering (IPE) + production LLM pipelines + a proven 3-week ship velocity — exactly Porichoy’s stack.

AdalatAI — court AI, F1 0.963

JoISetu — 6,593-well live map

RippleUp

Production Android + Windows desktop app (Compose), release v5.3.3

StealthHumanizer

Self-trained LLM system on a VPS, ~45s/request at production

Shipped systems (live screenshots, left to right)

WHAT WE ASK FROM NIC 3.0

The pollination grant to fund the 10-factory pilot · bootcamp mentoring on RMG business models & circularity
Warm intros: 2–3 pilot factories + one buyer sustainability team

WOMEN AT THE CENTER

Designed in from the first commit — not bolted on.

NEW SKILLED JOBS

2 women operators per factory trained & certified as DPP Data Stewards — formal, higher-skilled back-office roles.

JOBS PROTECTED AT SCALE

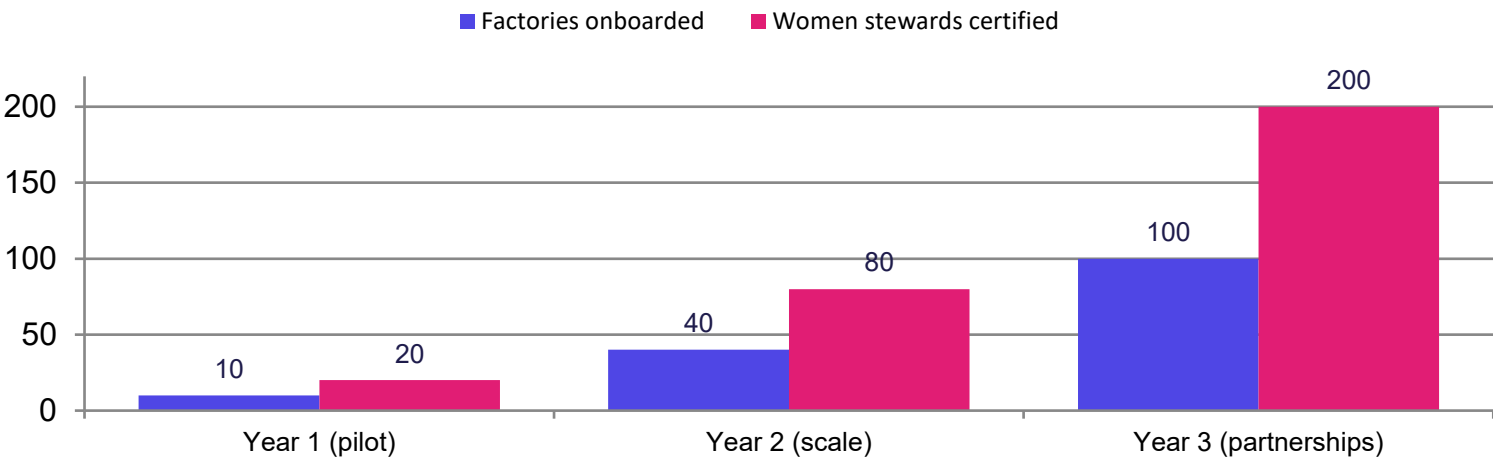

Auto-checked EU customs mean non-compliant factories lose orders; compliance protects a majority-women workforce.

BURDEN → CAREER

Ad-hoc clerical compliance work — often by women staff — becomes a titled, certified, visible career path.

“The last mile of the Digital Product Passport runs through Bangladesh’s factory floor — and it will be walked by its women.”

Year-1 targets → scale (roadmap targets)
